

# web2school

## CORE SYSTEM

### overview

Configure and manage student demographic data, personnel demographic data, and course information with the core system. The Student window allows users to access or edit any aspect of a student's record for any school year from a single student screen based on the other installed web2school systems.

The Personnel window enables users to store personnel demographic data and attendance, teacher schedules, homeroom information, certifications, and department(s) with which the teacher is associated.

The Course window stores credit values, track weight, and department association. It indicates whether or not the course should be included in GPA/QPA, Honor Roll, and Transcript. Prerequisites to the course can be defined, as well as state course name, number, and department.

ID	Course #	Course Name	Department	Active
103	103	SHAKESPEARE	ENGLISH	<input checked="" type="checkbox"/>

Calculation Info | Pre-requisites | State Info | Schedule

Course Credit: 1  Include In Honor Roll  
Grading Period Credit: .25  Include In GPA / QPA  
Track / Level: 1  Include In Transcript
